What else does the Django template contain besides Python code?	1/1point	
Static HTML elements		
Markdown elements		
○ XML elements		
O Dynamic HTML elements		
○ Correct     Correct. The static HTML elements work with special Python code to generate dynamic web pages.		
2. Three files are created by Django after you've created a project. Which of these files is a command-line interface used to interact with the Django project?	1/1 point	
o access,py		
○ settings.py		
O urls.py		
manage.py		
Correct Correct. manage.py is a command-line interface used to interact with the Django project to start the server, migrate models, and so on.		
3. For the onlinecourse example, when registering the course and instructor models in the Django admin site, you would write and run "admin.site.register(Course)" and what other code statements?	1/1 point	
admin.site.register(App)		
admin.site.register(Superuser)		
admin.site.register(Instructor)		
admin.site.register(Admin)		
Correct Correct. You would write "admin.site.register(Course)" and "admin.site.register(Instructor)" to register the Course and Instructor models.		
4. When you map a URL to the course view, what file do you add path objects to?	1/1 point	
urls.py		
○ config.py		
O settings.py		
O manage.py		
Correct Correct. You add path objects to the URLConf file, normally called urls.py.		
5. Django template files display content, such as course names and descriptions. How is the content displayed?	1/1 point	
	1/1point	
○ XML		
O Plain text		
Markdown		
HTML		
<ul> <li>Correct</li> <li>Correct. Django template presents the data provided by Django views as HTML files.</li> </ul>		

O There is no difference	
MVT has a View	
The Django framework or Django server itself acts as controller	
MVC has a Model	
✓ Correct  Correct. In the MVC design pattern, there is a controller that routes requests, processes input, requests data CRUD, and updates View. In the Django framework, these functions are performed by Django itself.	
7. What two development tasks need to be performed to manage and determine which data will be presented to the UI?	1 / 1 point
O Control the project	
O Sort data and sort views	
Model data and create views	
Access data and build tables	
Correct Correct. In the Django app development process, developers create Django models to model the data and create views to determine which data need to be presented to the UI.	
8. Which command is used in the Django Admin video to start the server?	1/1 point
python manage.py startDjango	
python manage.py startojango     python manage.py runserver	
o python manage.py startserver	
O python manage.py run	
<ul> <li>Correct         Correct. This command is used to start the server.     </li> </ul>	
9. Django functions, like View, accept arguments as input and return something. Typically, View needs an HTTP	1 / 1 point
request object as the first argument. What does this request object contain?	
O Python commands	
O Python scripts	
O Django static files	
Read-only HTTP metadata	
Correct Correct. The HTTP request object contains read-only HTTP metadata about the request such as method type, HTTP header, parameters, or payload.	
10. Django template file structure sometimes has two files created with the same name. How do you ensure Django points to the correct file?	0 / 1 point
Add an identifier	
O Note the differences	
○ Name spacing	
O Add metadata	
⊗ Incorrect	

Ω
